Statistics & Applied Mathematics M.S., Ph.D., Scientific Computing & Applied Mathematics M.S.

What tracks are available in the Statistics & Applied Mathematics program?

**Statistics and Applied Mathematics**: This track is for students emphasizing Statistics.

**Applied Mathematics and Statistics**: This track is for students emphasizing Applied Mathematics.

What is the unit requirement for the M.S. and Ph.D.?

**M.S. Program**: 35 units of core courses plus two additional 5-unit courses from an approved list, for a total requirement of 45 units. For the M.S. degree, students will conduct a capstone research project in their second year.

**Ph.D. Program**: 35 units of core courses plus four additional 5-unit courses from an approved list, for a total requirement of 55 units. Ph.D. students will be required to serve as teaching assistants for at least two quarters during their graduate study. Certain exceptions apply.

What salary (on top of tuition and fees) do first-year Graduate Student Researchers in your program earn? Our GSRs earn between $6,125-6,532.50 per quarter.

When are graduate applications due for your program?
January 3 for SAM M.S. and Ph.D; February 1 for SciCAM M.S.

Where can I find detailed information about the admission and application process?
ga.soe.ucsc.edu/admissions

Who can I contact for more information?
Lisa Slater, Graduate Program Adviser
(831)459-3609, lmslater@ucsc.edu

http://ams.soe.ucsc.edu/academics/graduate
Nicholas Brummell  Fluid dynamics, magnetohydrodynamics, numerical simulations of geophysical and astrophysical dynamics, especially solar interior physics, supercomputing

David Draper  Bayesian statistics, hierarchical modeling, Bayesian nonparametric methods, model specification and model uncertainty, quality assessment, risk assessment, statistical applications in the environmental, medical, and social sciences

Pascale Garaud  Astrophysical and Geophysical fluid dynamics, magnetohydrodynamics, analytical and numerical solutions of partial differential equations related to these phenomena

Qi Gong  Computational methods for real-time control systems, trajectory optimization and motion planning, nonlinear filtering and observer design, robust and adaptive control of nonlinear systems, industry applications of control theory

Athanasios Kottas  Bayesian nonparametrics, mixture models, modeling and inference for point processes, nonparametric regression, survival analysis, applications in biometrics, ecology and environmental sciences

Herbert Lee  Computer simulation experiments, spatial statistics, inverse problems, model selection and model averaging, nonparametric regression, neural networks, classification and clustering

Juhee Lee  Bayesian statistics, bayesian nonparametrics, modeling in biosciences and clinical trials

Marc Mangel (Emeritus)  Mathematical modeling of biological phenomena, especially quantitative issues in fishery management; mathematical and computational aspects of aging and disease, impact of technology on biological systems

Dejan Milutinović  Stochastic dynamical systems and statistical signal processing, multi-agent systems/robotics, systems biology/immune system, optimal control, hybrid and discrete event systems

Raquel Prado  Bayesian non-stationary time series modeling, multivariate time series, biomedical signal processing and statistical genetics

Abel Rodríguez  Bayesian nonparametrics, Bayesian time series and spatial models, machine learning, document modeling, public health, financial econometrics, structural proteomics, genomics

Bruno Sansó  Bayesian spatio-temporal modeling, environmental and geostatistical applications, modeling of extreme values, statistical assessment of climate variability

Daniele Venturi  Uncertainty Quantification (UQ) and computational probability, multi-fidelity stochastic modeling and data-driven stochastic multiscale mathematics, numerical analysis and high-performance scientific computing, probability density function methods for forward and inverse UQ problems, Mori-Zwanzig approach to dimension reduction and uncertainty quantification, functional differential equations

Hongyun Wang  Single molecule studies and biophysics, statistical physics, stochastic processes and stochastic differential equations, classical analysis, numerical analysis
